

# Tower Pincer

The Impact-A 280mm Tower Pincers are another quality product from Impact-A. Designed and tested by tradies working on the job, the PVC coated grips provide extra grip and comfort, while the extra leverage enables superior cutting power.

The hardened steel jaws design allows the nippers to become flush with the surface, enabling the pincers to grab the material at the closest point, allowing you to cut flush, or get a better leverage when pulling the nails out.

If using the tool for tying or cutting wire, the Carbon Steel Pincers will provide you with a solid purchase on the wire and an effortless cut, especially with the help of the extended handle length.

## Key Features

- Extracting deep embedded nails from timber
- Extracting nails from concrete
- Top quality with grade 55 Carbon Steel
- Coated grips for extra grip and comfort
- Better leverage when pulling out nails
- Cutting capacity 3mm steel wire
